Power BI model and DAX measures

Tables loaded (SQL Server, Import mode)

`touchpoints`, `vw_attribution_all`, `vw_channel_role`, `vw_journey_patterns`, `vw_journey_segments`. No relationships are needed: each view is a summary built for one page. A visual must use fields from a single table.

Model settings

- `vw_channel_role[Touchpoint_Type]` -> Column tools -> **Sort by column** -> `stage_order`.
- Create every item below with **New measure** (not New column).

Measures on touchpoints (page 1)

```
Total Journeys = DISTINCTCOUNT(touchpoints[Journey_ID])

Converted Journeys =
CALCULATE(DISTINCTCOUNT(touchpoints[Journey_ID]), touchpoints[Revenue] > 0)

Conversion Rate = DIVIDE([Converted Journeys], [Total Journeys])      -- format as
Percentage, 1 decimal

Total Revenue = SUM(touchpoints[Revenue])

Avg Touchpoints per Journey =
AVERAGEX(VALUES(touchpoints[Journey_ID]), CALCULATE(COUNTROWS(touchpoints)))

Avg Journey Duration (Days) =
AVERAGEX(
    VALUES(touchpoints[Journey_ID]),
    DATEDIFF(CALCULATE(MIN(touchpoints[Date])), CALCULATE(MAX(touchpoints[Date])), DAY)
)
```

`Converted Journeys` filters on `Revenue > 0` because only purchase rows carry revenue. It avoids data-type problems with the `Conversion` bit column.

Measures on vw_attribution_all (page 2)

```
Attributed Conversions = SUM(vw_attribution_all[attributed_conversions])

Attributed Revenue = SUM(vw_attribution_all[attributed_revenue])

% Share by Model =
DIVIDE(
    SUM(vw_attribution_all[attributed_conversions]) + 0,
    CALCULATE(
        SUM(vw_attribution_all[attributed_conversions]),
        ALLEXCEPT(vw_attribution_all, vw_attribution_all[model])
    )
)
```

`ALLEXCEPT` keeps the model filter and drops the channel filter, so each model column adds up to 100%.

Measure on vw_channel_role (page 4)

```
Channel Role % = AVERAGE(vw_channel_role[pct_of_channel])
```

Optional extras

```
Avg Intent Score = AVERAGE(touchpoints[Intent_Score])
Revenue per Converted Journey = DIVIDE([Total Revenue], [Converted Journeys])
Lost Journeys = [Total Journeys] - [Converted Journeys]
```

Visuals

Page	Visual	Fields
1 Journey Overview	5 Cards	Total Journeys, Converted Journeys, Conversion Rate, Avg Touchpoints per Journey, Avg Journey Duration (Days)
1	Clustered bar	Axis `vw_journey_segments[segment]`, value count distinct `Journey_ID`
1	Clustered bar	Axis `channel`, value `attributed_conversions`, **visual filter `model` = First Touch**
2 Attribution Comparison	Matrix + color scale	Rows `channel`, Columns `model`, Values `% Share by Model` (column subtotals off)
3 Journey Intelligence	Table	`path`, `journeys`, `conversions`, `conv_rate_pct` (Average), `avg_revenue` (Average), `avg_touchpoints` (Average); filters `avg_touchpoints` >= 2 and `conversions` >= 3; sort by `conv_rate_pct` desc; totals off
4 Decision Center	Matrix + color scale	Rows `Channel`, Columns `Touchpoint_Type`, Values `Channel Role %`; plus four text boxes (Protect / Invest / Optimize / Investigate)
